Interfaces - WAN

On this page you can configure the network interfaces. You can bridge several interfaces by ticking the "bridge interfaces" field and enter the names of several network interfaces separated by spaces. You can also use [VLAN](#) notation INTERFACE.VLANID (e.g.: eth0.1).

Common Configuration

General Setup	Advanced Settings	Firewall Settings
Bring up on boot ☐		
Use builtin IPv6-management ☒		
Enable IPv6 negotiation on the PPP link ☐		
Modem init timeout 20 Maximum amount of seconds to wait for the modem to become ready		
Use default gateway ☒ If unchecked, no default route is configured		
Use gateway metric 0		
Use DNS servers advertised by peer ☒ If unchecked, the advertised DNS server addresses are ignored		
LCP echo failure threshold 0 Presume peer to be dead after given amount of LCP echo failures, use 0 to ignore failures		
LCP echo interval 5 Send LCP echo requests at the given interval in seconds, only effective in conjunction with failure threshold		
Inactivity timeout 0 Close inactive connection after the given amount of seconds, use 0 to persist connection
